Appl. No. 10/511,944 Amdt. Dated April 7, 2009 Reply to Office action of January 7, 2009 Attorney Docket No. P16579-US1 EUS/J/P/09-3129

ABSTRACT

This proxy for at least one end-to-end data flow in a network comprises an estimation unit, for estimating the current minimum data load necessary to occupy the bandwidth available to the flow in the network. The estimation unit outputs a flow's pipe capacity estimation. This proxy also comprises a comparison unit, for comparing the estimated pipe capacity with a predetermined capacity threshold, a decision unit, for deciding to proxy the end-to-end flow if the estimated pipe capacity lies above the capacity threshold, and a routing unit, for routing the flow according to the decision.
